

Lesotho CMS analysis results

Purpose: Share measured findings from Vara’s old CMS structure pack and the Raisd gap / CAP-53 read plan with the Working Group.

Cut: 5 October 2026 · **Pilot campus:** Lesotho (M4) · **Live:** still 0% (Demo ≠ Live)

Audience: WG CMS 2026 · sponsors · portal / API owners

campus2_lesotho

369 tables

CAP-53 R1 mapped

NMDS ≠ DTEF

No PII in repo

1. Headline for everyone

We now have a **measured** Lesotho old CMS structure (campus2_lesotho), not a proxy guess. CAP-53 **read** mapping is ready. Raisd still needs private MySQL access before Portal API code can go Live. Applicant and staff portals remain **Not started** — student Demo alone will not pass M4 government parity.

portal_*_lesotho tables

~83%

Table-name overlap vs
Botswana

2. What we analysed

LAYER	EVIDENCE	STATUS
Older Lesotho CMS (SoR extract)	Vara Drive pack 5 Oct — tables / views / procs structure only	Inventoried
Newer Lesotho CMS (feature bar)	Screenshots only (staging has live student data)	UX benchmark
Raisd Schema v3 + Portal API	Demo records; CMS stub	Demo
Frontend (SDD-11)	Student deepest Demo; applicant + staff Not started; Live = 0	FE gap

Dump SQL / PHP / credentials stay under local _local/ — never committed. Published artefacts are names, field maps, and gap matrices only.

3. Key technical results

CAP-53 (CMS ↔ Portal API)

- **Hooks exist** (Botswana-class, not Sierra Leone greenfield): 5 × portal_student_*_lesotho + 6 × api_student_* / api_faculty_* SPs.
- Campus key fits LESOTHO (Campus varchar(7)).
- Phase R1 **read** mapping documented → student get* methods.
- Writes still open: WG must decide adapter-to-old-CMS vs Schema cutover.
- **Blocked for code** — need private MySQL / integration replica for portal-api lesothoRead.

NMDS (government sponsorship) ≠ Botswana DTEF

- Old CMS uses assist provider nmDS / NMDS + borrower-like AssistStdAcc.
- Term billing via b_assistbilling* (bill nos like LSO/{YYMM}/...) — **internal**, not a TEF.gov POST.
- **Do not** reuse Botswana DTEF / tef.gov.bw client.
- National NMDS HTTP API still unproven (may live only in newer CMS).
- Config debt: assist BillCurrency still RM/USD — Raisd must use **LSL / M**.

Admissions / flows (schema × FE)

- 3-step review has physical columns: Faculty* → AQA* → Registry* on app_applicationform.
- Rank / overall score seen in newer UI — **not** in old application table columns (confirm with campus).
- LGCSE: flat education subjects + document tables; need campus extract model (Sesotho).
- Online enrolment path: online_enrollment + payment verification SPs.

4. Gap rollup vs Raisd today

FLOW	OLD SCHEMA	RAISD FE	SEVERITY
Admissions apply + 3-step	app_* + Faculty/AQA/Registry	Not started	Blocker
Term registration	online_enrollment + confirm SPs	Student Demo	Blocker
NMDS awards	nmds + billing	Student Demo	Blocker
CAP-53 writes / SoR path	SoR desks vs Schema TBD	Partial FE	Blocker
LGCSE / LSL finance / clearance / SoR print	Present, campus-shaped	Mostly Demo / Not started	High
EMGS / thick accommodation / FiveDays LMS	Present or external	—	Out of M4

5. Suggested next cut (M4)

1. Grant Portal API **read** access to Lesotho integration MySQL → implement `lesothoRead`.
2. Applicant CAP-02/03 + LSL fee verification + LGCSE extract model.
3. Staff admissions Faculty → AQA → Registry.
4. CAP-10 registration writes + CMS side-effect tests.
5. CAP-48 NMDS scheme seed · CAP-15 clearance · CAP-45–47 finance.
6. Staff portal shell + positions RBAC.

Asks for the Working Group: (1) Private read access to `campus2_lesotho` for Portal API integration · (2) Confirm Live SoR path (old CMS adapter vs Schema v3) · (3) Confirm whether newer CMS / government exposes an NMDS HTTP API · (4) Confirm rank/score persistence for admissions parity.
